Cook Incorporated's Zenith Branch Endovascular Graft Receives CE Mark Approval

October 10, 2006 | 1 min read

BLOOMINGTON, Ind.--(BUSINESS WIRE)--William Cook Australia, a global leader in endovascular therapy products, has taken another major step forward in the treatment of complex aortic aneurysms. The Zenith Branch Endovascular Graft, a new product using Cook's groundbreaking Zenith anchored endograft technology, has received CE Marking approval in Europe, allowing its distribution in the European Union and other countries that recognize the CE Mark.

Why Preserve Hypogastric (Internal Iliac) Artery Flow?

1. Prevention of Pelvic Ischemic Complications

- *Erectile dysfunction*: ~4%
- *Persistent symptoms (>6 months)*: ~16%
- *Buttock claudication*: up to 28%

Medical history:

history of hypertension, CAD, atrial fibrillation

Fiber Optic RealShape (FORS) Technology for Endovascular Navigation in Severe Tortuous Vessels

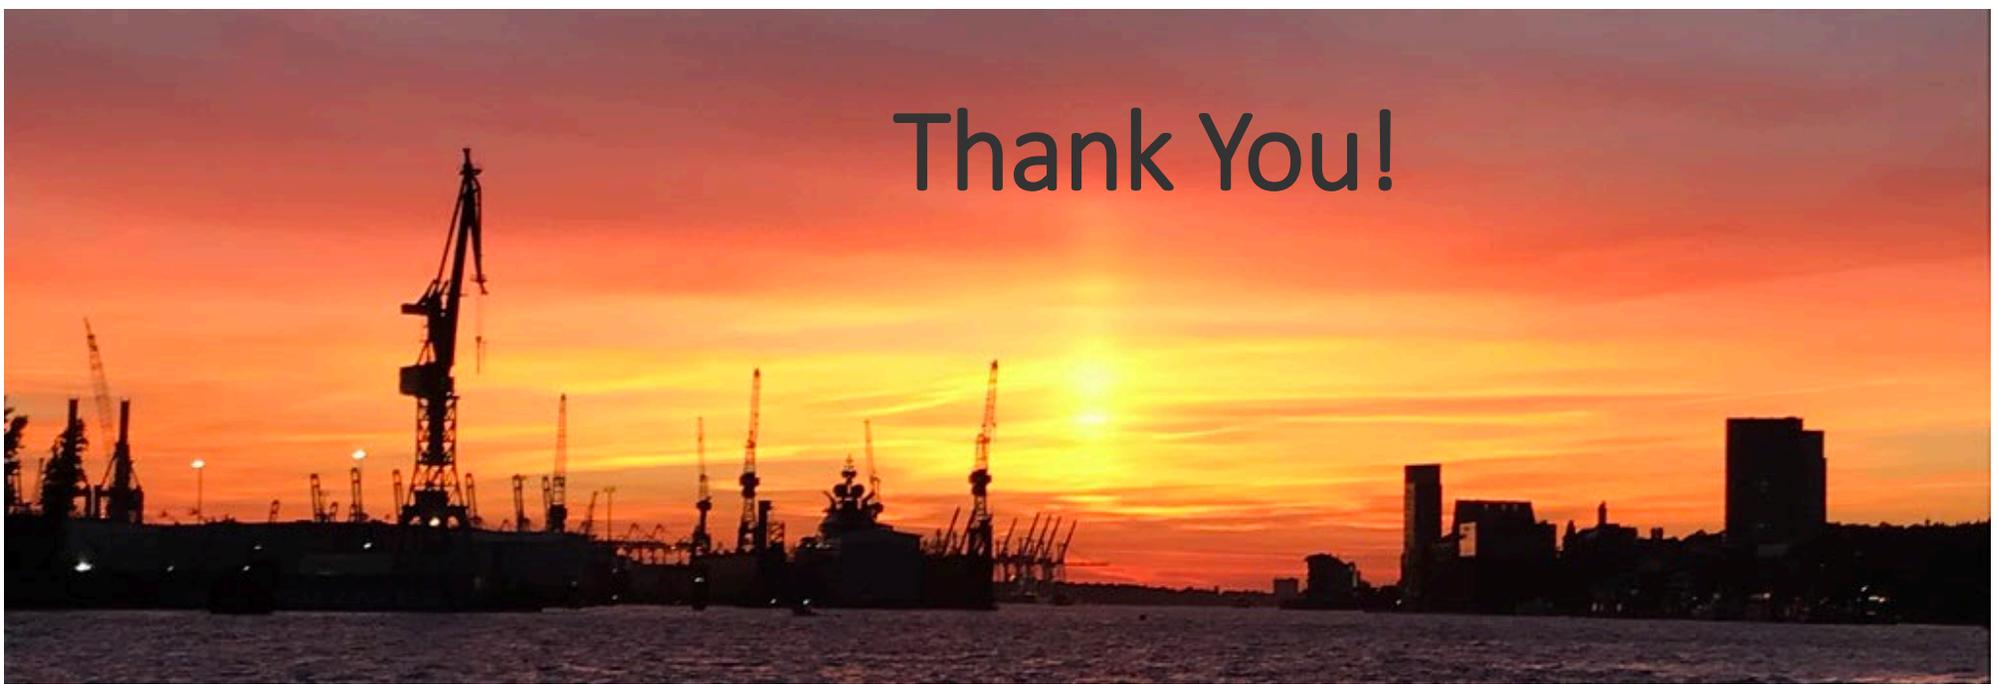

Conclusions

Iliac Branch Devices (IBDs) have proven **and effective** solutions, with high patency and lower reintervention compared to embolization techniques.

Available grafts extend their applicability **significantly**, especially because they can be **combined with each other effectively**.

Pay attention... and don't step too hard on the X-ray pedal!

Thank You!
